

ASH GROVE CEMENT WEST, INC.

Inter-Office Memorandum

Date December 2, 1986

To Jim Post

From Ken Rone

Copies to Erik Voldbaek

Subject Activity Report
Week Ending 11/30/86

1. Tilbury Cement notified that they would have insufficient clinker to supply the final Type II barge of the year. Type I was loaded for the balance of the load. We are unable to receive further loads of clinker due to lack of silo space. If this situation should change, we will notify all parties of our need for further delivery.
2. Loading last of coal cars to Durkee. Coal is very wet due to heavy rains. There is some limerock contamination from the pad.
3. District Manager from MSHA came to the plant to present certificate for two years without a lost time accident.
4. Held safety committee meeting. No reportable accidents.
5. Requested that Union Pacific Railroad begin steps to abandon the easement at the southeast corner of our property. Will not take any action on Port of Seattle easement.
6. Notified on 11/26/86, that limestone barge turned over at Tilbury wharf causing extensive damage. Clinker loading system is unaffected.
7. Visitors: Yourselves and Mr. Wells.
